

Project name: Savings Calculator

Team name: Savings Calculator

Programmer: Maria Echeverri Solis

The goal of my project will be to help users keep track of the money that they are saving up by helping them calculate how much they have gained with the interest in their savings account. Additionally, the user can calculate future earnings, a budget, and receive a report of their calculations. The program will create files to keep track of the user's information and reference them in a future circumstance.

Plan and estimate of effort:

I plan for this project to take a minimum of two weeks to complete and test for accuracy and no syntax errors.
